

1. **Burkitt's Lymphoma of the Skull Calotte: A Case Report**  
(Linfoma de cráneo de Burkitt: informe de un caso)

**INVESTIGADORES:** Carmen Rosa Cerron-Vela, William J Araujo-Banchon.

**REVISTA:** Rev Fac Cien Med Univ Nac Cordoba 2020 Apr 14;77(2):106-109. doi: 10.31053/1853.0605.v77.n2.26764.

**ABSTRACTO:** Introduction: Burkitt's lymphoma is a non- Hodgkin B-cell lymphoma whose cranial location is extremely rare. Clinical case: The case of a 35-year-old Peruvian man with a progressive parietal left cranial tumor is described. A biopsy with immunohistochemistry was performed for the diagnostic confirmation of Burkitt's lymphoma. First-line outpatient treatment with CODOX-M/IVAC was initiated, however, he stopped attending his treatment for 2 months. He returns, he is shown progression of the disease and is treated with rituximab, ifosfamide carboplatin and etoposide. Does not respond satisfactorily and dies. Conclusions: Burkitt's lymphoma is a very aggressive tumor that, if not treated in a timely manner, has high mortality, as happened with the patient in the case
